DUROLEVUM, THE EVIDENCE OF THE COINS

BY G. C. F. HAYTER, AND W. WHITING, FF.S.A.

COINS found near Ospringe (1923-6) (from Syndale Park, the Field adjoining Stone Church, and in the cemetery).

Roman coins have been found on these sites before the recent excavations as reported in *Arch. Cant.* (Vol. IX., pp. lxxii-iv).

No coins whatever were observed in the digging of sundry holes and trenches within the Syndale Camp area, carried out by Major George Wheler and other local workers during the years 1921-3. One coin was discovered in Syndale Park in 1923 (in the rubbish pit at "H" on the plan¹), namely a sesterlius of Commodus (No. 6). The only one noticed in the earlier cemetery excavations was found in 1923 under a much decayed skull and is a coin of Postumus (No. 10). At the time of writing this, three Roman coins found in the neighbourhood have been presented to the Maison Dieu Museum for preservation with the collection there, viz. :—

(1) from the Plantation on the South side of Abbots Hill, Ospringe (i.e., exactly one mile due South of the cemetery) a dupondius of Claudius I (No. 1) ;² and

(2) from the gardens of Westwood Cottages in Salters Road, in the adjoining parish of South Preston (i.e., about 1½ mile E.S.E. of the cemetery) a third brass of Constantine the Great (No. 20).

¹ See plan in *Soc. Antiq.: Report of Research Committee*, No. 8, "Excavations at Ospringe."

² Pottery is recorded as having been found "between Ospringe Parsonage and the Brooks" (probably in this same field). See G. Bedo, in *Arch. Cant.* IX, lxxii.

(3) A third brass of Licinius (No. 67), not included in the Antiquaries' Report, nor in the following list. This coin was found in 1920 about the same time as the three pots comprising group XIX (*Arch. Cant.*, XXXVI., p. 73), but not linked up with the pottery till seven years later; the donor vouches for its provenance and it constitutes an excellent confirmation of the date of this isolated burial. The dry summer of 1921 revealed a habitation site on the slope of the hill about one furlong West of the burial; funds were only available for a few trenches; some coarse ware pot-sherds were disclosed but no foundations of buildings were recognised by the then inexperienced excavators.

The main excavations yielded sixty-four coins in all, bringing the total to sixty-seven; two of these were Mediæval, both from the cemetery; the remainder are spread out over the whole of the Roman occupation of Britain, ranging from Claudius to Arcadius. However, as there are only six coins of the first two centuries and all of these show signs of considerable wear, it would be rash to treat them as evidence of an early occupation. Twelve belong to the latter half of the third century. Of the remaining forty-seven, as many as thirty-two are of the Constantine family, with the others spread out fairly evenly down to the last decade of the fourth century. From this evidence it is difficult to say when the occupation of this area began, but it seems fairly certain that the place flourished under the Constantines and continued, though with steadily diminishing wealth and importance, at least until the end of the century.

The only coins definitely associated with any pottery were the four which were found in the urn No. 345. This burial group was one of the seven selected by the British Museum, where it is now housed. The coins are thus described: "Trajan, 117-138" (two), "Faustina Junr., before 161 A.D." and "Commodus, struck 166-175 A.D." It has been remarked that these too are much worn and had probably been in circulation for some considerable time before burial; they are not included in the totals or following description.

A summary of the distribution of the coins is appended :

Individually the coins present no special interest ; here and there one has remained in good condition, but the

majority have a soft rather powdery surface which turns the softest brushing into a drastic treatment. There occur three varieties not recorded in Cohen.
